

Artificial Intelligence — Course Syllabus

Learn AI algorithms, deep learning and intelligent systems.

Duration	6 Months	Level	Advanced
----------	----------	-------	----------

Tools & Technologies Covered

Python, NumPy, TensorFlow, PyTorch, OpenCV, NLP libraries

Course Modules

Module 1: Foundations of AI

- History and branches of AI
- Search algorithms and problem solving
- Python for AI: NumPy and data handling

Module 2: Machine Learning Essentials

- Supervised and unsupervised learning
- Model evaluation and tuning
- Feature engineering

Module 3: Deep Learning

- Neural networks and backpropagation
- Convolutional Neural Networks (CNNs)
- Recurrent Neural Networks (RNNs) and LSTMs

Module 4: Applied AI

- Computer vision with OpenCV
- Natural Language Processing basics
- Intelligent agents and reinforcement learning intro

Module 5: Capstone Project

- Design and train an end-to-end AI model
- Model deployment basics

Learning Outcomes

- Design and train deep learning models using TensorFlow/PyTorch
- Apply AI techniques to vision and language problems
- Build and evaluate intelligent systems for real-world use cases

For more details, batch timings and enrollment, visit the [EduClasses website](#) or contact our admissions team.
